Profile

Computer Engineering student who combines software development, data analysis, and product design, building prototypes that go from data to interface.

Education

Computer Engineering / Universidad de Especialidades Espíritu Santo 2024 - 2028

- **GPA:** 90.1 / 100
- **Reference:** Lohana Lema, Director of the Computer Engineering Program, UEES — lohanalema@uees.edu.ec

Design / Universidad Católica Santiago de Guayaquil 2022 - 2023

- Training in design principles, color theory, and visual composition.

Experience

Teaching Assistant - Fundamentals of Programming / UEES 2025

- Supported more than 10 students during a semester in Python review sessions, covering exercises on control structures, functions, arrays, and additional libraries.

Featured Projects

- **PhoenixGrow:** Designed a food security mobile application for Phoenix, Arizona, featuring over 20 screens and a design system created in Figma. Integrated geospatial data research with Python to address food access issues in Phoenix, Arizona.
- **Catventures:** Developed a platform game with progressive levels and difficulty in Unity 2D using C# with custom assets created in Adobe Illustrator.
- **DashboardBI:** Developed a desktop application to analyze financial company data, integrating JavaFX with Supabase and applying database denormalization and management techniques.
- **Book Tracker:** Built a desktop application in Laravel (PHP) connected to the Open Library API and SQLite to log reading activity.

Skills

Languages and technologies: Python, Java, JavaScript, C#, PHP, SQL, PostgreSQL, SQLite, React, Node.js, Laravel, Git, Pandas, Matplotlib, Excel

Competencies: Product design, design thinking, prototyping, data analysis

Design: Figma Design, Adobe Illustrator, Adobe Photoshop, Figma Make, Procreate

Certifications: AWS Academy Cloud Architecting, Adobe Illustrator, Adobe Photoshop

Languages: Spanish (native), English (B2 - Cambridge)

Achievements

SpaceHack 2025 / Global 1st Place

- Global 1st place with PhoenixGrow in the international hackathon organized by the University of Arizona.

WiDS Datathon 2026 / 3rd Place

- Developed a model to recommend fire evacuation routes in Guayaquil using Python, routing algorithms, and data from NASA FIRMS and Open-Meteo APIs.

SpaceHack 2026 / Participant

- Developed a news verification web prototype that combines satellite data from Google Earth Engine and data analysis to identify climate change misinformation.

Infomatrix 2020 / 2nd Place

- Created an animated short film on food awareness using Adobe Illustrator and Adobe After Effects.
